Bambu

accessories for
wind instruments

Description

Bambú's microfibre cleaning kits and swabs absorb humidity and grease rapidly and without leaving any residues. Microfibre acts as a magnet for dust, dirt and oils and absorbs much more than conventional fibres thanks to its woven filaments, which are 100 thinner than a human hair. This material does not scratch the instrument.

It cleans, polishes and burnishes the musical instrument with no need for chemical products.

Our line of cleaning swabs and kits has been designed with the objective of guaranteeing a perfect maintenance of the inside and the outside of the musical instrument.

Microfibre cleaning kits
and swabs

Cod KL01

Description

Bambú's hand-woven ligatures are handmade with highly-resistant synthetic fibres. The weaving process used for their fabrication guarantees that they will never stretch. The fibres are 100% synthetic, and it is for this reason that these ligatures are long-lasting and

easy to clean. This product has been designed in order to offer the possibility of adjusting the pressure of the ligature in the most convenient way for each user. Their adjustable system also provides an easy placement on the mouthpiece and fixes the reed perfectly to fit each musician's preferences.

Hand-woven Ligatures

Our ligatures are entirely hand-made and are exposed to several testing processes in order to guarantee their perfect termination.

Cod AC

Bb Clarinet Ligature

Cod AS

Soprano Saxophone/Eb Clarinet Ligature

Cod AA

Alto Saxophone Ligature

Cod AT

Tenor Saxophone Ligature

Cod AB

Baritone Saxophone/Bass Clarinet Ligature

Bambú hand-woven ligatures have numerous features, which include their capability of allowing a comfortable light staccato and an ample sound projection. When used for the clarinet family, these ligatures have the characteristics of darkening the sound and facilitating the performance of the highest notes. For the saxophone family, the woven threads allow the reed to vibrate in a different way from metal or leather ligatures, which is appreciated by musicians who are looking for a wider range of sounds.

01 - BLACK

02 - BURGUNDY

03 - RED

04 - NAVY BLUE

05 - SAPPHIRE BLUE

06 - ORANGE

07 - SILVER

08 - OLIVE GREEN

09 - MIDNIGHT GREEN

10 - BRIGHT GREEN

11 - PURPLE

Description

Bambú's cork grease has been specially designed to lubricate the joints of wind instruments. It preserves the flexibility and impermeability of the cork and it helps to

seal micropores avoiding air leaks.
Presentation: Boxes of 20 units (4.5g each).

Cod GC01 **Cork grease** container of 4.5g
